Universal Manufacturing engineers and manufactures high-quality public access stair towers to meet your specifications. Our engineering team will work with your company to provide the public with safe temporary access to buildings and thruways during construction.

Custom Pedestrian Access Stairs

Big or small, our experienced engineering team will help you create a safe and efficient pedestrian access solution to keep pedestrians moving safely through your construction site.

Our pedestrian access stairs are manufactured with the highest-quality materials and inspected by our experienced fabricators and engineers. Our design and testing data meet or exceed the guideline requirements set by the International Building Code (IBC).
Our Public Access Stair Towers are designed and manufactured to meet your specifications.

Universal Manufacturing Provides:
- A team of experienced Universal Engineers
- Your specifications and goals in mind
- Highest quality raw materials that are certified by our supplier
- A quality control and inspection team that validates achieved specifications
- Manual and robotic laser cutting and welding to achieve superior quality while reducing lead-times
- Universal powder coating technology and high-end galvanized steel to withstand the harshest industrial and weather environments
- Pedestrian safety features in all of our public access stair towers
